

# SHARING POSTS ON FACEBOOK

## HOW TO SHARE A POST ON FACEBOOK?

Depending on the privacy settings of the original post (e.g. if someone chose to share their post with [Friends](#)), you may not see the option to share it.

To share a post you see on your Feed:

1. Below a post, click  **Share** in the bottom right.
2. Select where you want to share the post. Depending on the post's privacy settings, you may see the following options:

Share now 

The post will be shared to your Feed and timeline with your current privacy settings.

Share to Feed 

You can customise the post (e.g. add a description) before you share it. If the post includes a link, you can choose to share the link by itself, or click next to **Include original post** to keep the text from the original Feed post. You can click the [audience selector](#) to change your audience, then click **Post**.

Share to your story (custom) 

Send in Messenger 

Share to a group 

Share on a friend's profile 

Share to a Page 

You can only share to a Page you manage. Click the drop-down menu to select the Page, then click **Share**.

Note: You can't share posts with people who weren't part of the original audience (e.g. a post shared with "Friends" can't be shared with "Public").
